## Announcing the DLT Electric 7DT7 Exact Fit Replacement Pump

Several years ago, after having received numerous requests from associates and colleagues in the Laundry – Dry Cleaning industry for an alternative to the boiler feed pumps currently available in the marketplace, we have developed a reliable and cost effective replacement for the pump size and horsepower most commonly utilized for this service.

As a pioneer in the design and manufacturing of regenerative turbine pumps, our many years of experience has resulted in the entry into the market of a direct pipe-in replacement for the 3/4 HP 7CT7M pump offered by the competition. This pump, our 7DT7, which was introduced to an intentionally limited market in early 2010 is now installed in hundreds of locations providing dependable boiler feed service in Dry Cleaning Plants around the country. We also offer MTH T41 Series Pumps for those who don't require exact replacement dimensions.

Our Synergy solutions will change the way you do business. Whether you do corporate partnerships on a large scale, small scale or medium scale, Synergy will streamline your communications and take your brand's success to the next level. Check them out in the Generitech store.

If you have a million things to do and only a small team to get it all done, Generitech's Bandwidth Series is for you! Bandwidth tools generate effective team organization and hiring solutions, so you can get large amounts of work done with only a few loyal team members.
